REPORT OF THE PROGRAMME

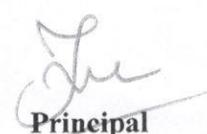

6. AIDS Awareness programme

Programme Organized by	NSS Unit
Name of the Event Organized	AIDS awareness programme
Date of the Event	26-08-2018
No of the Students Participants	32
Venue	Koovam
Faculty In-Charge	Mr.M Namachivayam
Contact Number	9940269316

The NSS volunteers created awareness on AIDS among Koovam villagers on 26-08-2018. Mr.M.Namachivayam Assistant Professor, Sri Venkateswara College of Engineering and Technology initiated his speech with life is full of wishes, love and ambition. AIDS is one of the most destructive pandemics in history. More than 38 million people have become the direct casualty of an HIV or AIDS related illness. The pursuit to find a cure for this life threatening disease is still going on. Creating mass awareness about AIDS to people worldwide is extremely important. This makes World AIDS Day an important day to celebrate every year.

The virus still remains undefeated in spite of much scientific advancement. A person who is affected by HIV must be on lifelong medication as it is a chronic disease. A sad reality about this virus is that people do not know how to protect themselves and others from HIV. Social stigma and discrimination affect the many people living with the condition more than the virus. World AIDS Day is important because it reminds us that HIV still prevails in society and so is the social stigma around it. Need to spread awareness among people, to raise funds for patients and to fight prejudice against the discrimination HIV diagnosed people face is really high. The public must attain proper knowledge about the virus and how to treat people living with HIV fairly.

5 HIV FACTS

- 1 People on effective HIV treatment can't pass it on**
 Effective treatment for HIV suppresses the virus to such low levels that it can't harm you and you can't pass it on.
- 2 HIV can't be passed on through day-to-day contact**
 HIV can't be passed on through things like touching, kissing, sharing cutlery or glasses.
 HIV can be passed on through sex without a condom but only if a person is not on effective treatment. It can also be passed on through sharing needles and during pregnancy (but in the UK this is extremely rare because we have great treatment).
- 3 HIV can affect anyone**
 Some groups of people are affected by HIV more than others, but it can be passed on to anyone.
- 4 People living with HIV can live long and healthy lives**
 There isn't a cure for HIV, but there is excellent treatment. If you are diagnosed in good time and take your medication, you can have as long and healthy a life as everyone else.
- 5 There are many ways to prevent HIV**
 - Getting regularly tested for HIV if you are sexually active
 - Taking PrEP or PEP (tablets which prevent HIV either before or just after you've been exposed to it)
 - Using condoms
 - Never sharing needles
 - Taking your medication if you are living with HIV
